

# THE MAGIC OF VIEWPORT AI-DRIVEN CONTEXTUALIZATION ENGINE FOR ASSET OWNERS AND OPERATORS

Quick to deploy and simple to master, Viewport's centralized platform delivers full visibility into all data and documents for process manufacturers.

## PRODUCTIVITY

Staff always have the right information, increasing production by 15-30%.

## COST SAVINGS

Visibility helps eliminate operational delays and expensive migration.

## COMPLIANCE

Documents are automatically tagged and connected to meet audit requirements.

## RELIABILITY

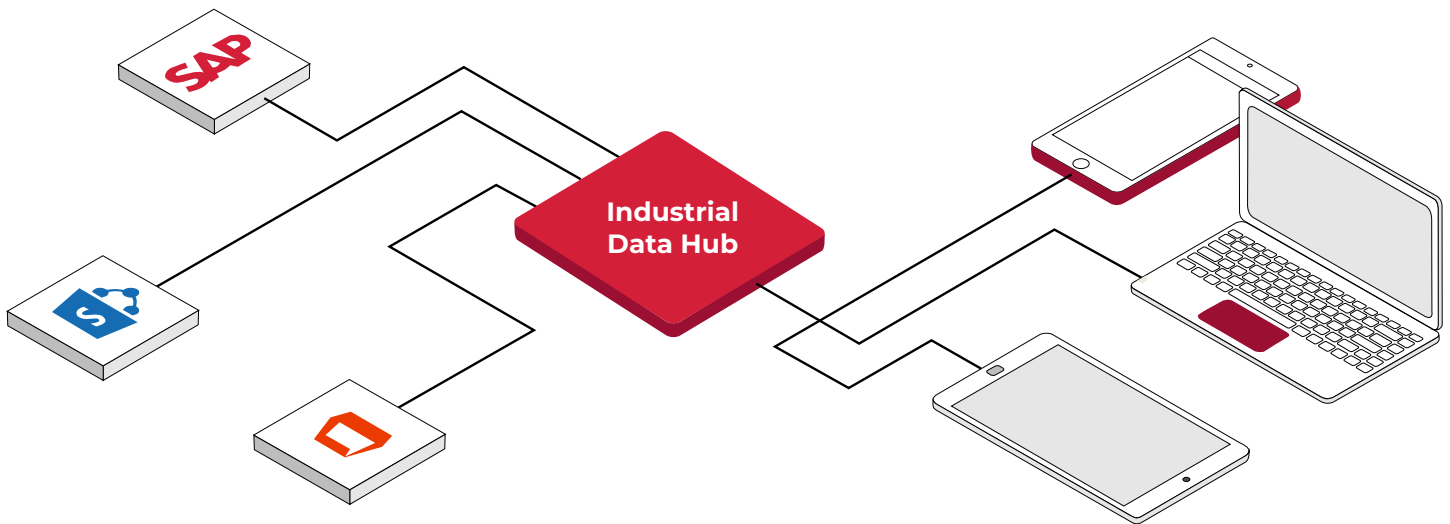

See your asset and operational performance in real time to make informed decisions.

## Why Viewport?

Built for asset owners and operators in process industries, Viewport provides instant access to your technical and engineering content through AI technology. A single hub gives workers the information they need immediately, increasing hands-on tool time, creating a safer working environment, and making it easy to hit production and compliance goals.

## Powered by Kinsmen Group

Kinsmen Group pairs our deep expertise in information management with Viewport and other tools to transform your data ecosystem. Sophisticated AI and machine learning algorithms make it easy to extend asset lifespans, streamline compliance, and reduce mistakes and maintenance costs — helping your company transition into a more efficient and profitable future.

## Critical Information at Your Fingertips

Viewport's single information interface makes your technical data and documents available in seconds — from all sources and systems to all departments and teams.

- AI linking and machine learning capabilities
- Supports 140+ different formats and data types
- Supports cloud and on-premise
- Deploys quickly
- Seamlessly integrate with your ERP, CMMS, and other systems

## When Visibility Unlocks Performance and Profit

Ben H. was struggling to keep his manufacturing operations on track. As the company modified aging facilities, data and documents were stored in 100's of disparate systems and file drives. Workers were tired of jumping from system to system to find information to start a work order; they sometimes had to waste hours or days to find correct specs, maintenance records, CAD drawings, and other needed records. Frequently they ended up with outdated information, causing costly mistakes.

Ben knew they had to find a solution to information chaos. His requirements led him to Kinsmen Group, which assessed their information maturity, and worked with Ben to create a plan.

Kinsmen Group used Viewport to create a centralized view for all critical asset documentation. Using machine learning and advanced AI, Kinsmen Group connected the documents and produced reports that revealed the gaps in information.

Ben was stunned with the results and how effortlessly all of their data came together. It was easy to find precise information, even when it contained spelling variations or information gaps. The solution was a game changer, reducing costs while extending assets' lifespans and keeping his workers safe and productive.

## Do you want more visibility into your operations?

Kinsmen Group has helped asset owners and operators worldwide solve their data transformation and management challenges. Let's talk about how leveraging Viewport or other tools can reduce operational headaches, increase visibility, and increase your competitive edge.

Experience the power of Viewport firsthand! Let us work with a subset of your data to show you its transformative capabilities in action—you'll be amazed at the insights and efficiency it brings. **Connect with us to see the magic of Viewport for yourself.**
